Camera Selection Guide
2017/2018

iAI®
Quality industrial cameras from JAI

No matter what vision business you’re in, you must be reliable and deliver results. That calls for an industrial camera supplier with a long, proven track record of delivering cameras with innovative engineering, high-end quality, and long lasting operational reliability and durability.

Our industrial cameras and accessories are routinely expected to perform under the most demanding conditions - from high-speed production and inspection machinery to applications in life sciences, outdoor surveillance, aerospace, and scientific research.

Today, JAI cameras are running in applications and industries around the world, where vision technology is relied upon as an integral part of a production process, product, or service with the aim of improving quality and accuracy of products, lowering production line inspection costs, increasing production yields or creating higher efficiency in road traffic.

Common to all our customers is that they value the trademark characteristics of our products: proven technology, high reliability, consistent quality and superior image fidelity backed by JAI’s long-term viability.

The JAI camera selection guide is also available as an on-line dynamic selection tool with filters and sorting capabilities. Please also visit www.jai.com to explore the easy-to-use on-line camera selection guide.

---

Strict quality assurance throughout the manufacturing process

Every electronic board mounted in a JAI camera undergoes thorough automated optical inspection, x-ray inspection and soldering inspection to ensure flawless electronics. During camera assembly, cameras are further submitted to aging tests, optical tests and a complete finish test including measurements and documentation against the EMVA 1288 standard.

---

Designed to perform in tough environments

You can rely on a JAI camera! Rugged designs are able to withstand operating conditions with high vibration effects (up to 10G) and high shock occurrence (up to 80G), classifying JAI cameras among the very best in relation to industrial reliability and durability.

---

Pick your preferred interface

JAI offers a range of different industry standard interfaces, so you are able to choose the interface of your preference for each individual vision task. JAI offers cameras with USB3 Vision, GigE Vision, GigE Vision LAG, CoaXPress, Camera Link and Mini Camera Link interfaces.

---

A JAI camera for every vision need

JAI offers a broad range of cameras to suit almost every imaging need in industrial, medical, science and outdoor imaging, including traffic and sports/entertainment applications. You can choose from a wide range of single-imager cameras starting at very attractive price levels or - if your vision application needs the very best in color fidelity - you can choose from a broad selection of prism-based multi-imager area scan and line scan cameras. JAI has it all.

---

Low cost-of-ownership

Every detail in a JAI camera – electronics, mechanics and software - is carefully engineered to ensure excellent product reliability and supreme image quality. As a result cameras from JAI offer high MTBF numbers, ensuring long lasting and trouble-free operation. For you, this means low cost of ownership for any JAI camera.

---

Close support - when you need it

You can post an e-mail question to our on-line helpdesk (support@jai.com) at any time – day or night. JAI’s technical experts monitor incoming support questions round-the-clock and the first vacant support technician will take the case to help you solve your problem and get your project moving.

---

Ultraviolet (uv) 200nm to 400 nm
Visible 400nm to 700nm
Near Infrared (NIR) 700nm to 1000nm
Short Wave Infrared (SWIR) 900nm to 1700nm

JAI supplies industrial CCD and CMOS area and line scan cameras for UV light, visible light, NIR light and SWIR light. Please also visit JAI’s on-line camera selection guide to filter your way to the camera you need.
Area Scan Cameras

Spark Series
(single-sensor)
Advanced area scan cameras delivering high resolution, high frame rates, and high image quality.

Go Series
(Single-sensor)
Megapixel area scan cameras with small dimensions, high frame rates and cutting edge sensor technology.

B-Series
(Single-sensor)
Cameras for applications that demand high image quality with traditional CCD imagers.

C-Series
(Single-sensor)
Compact value-oriented CCD cameras with resolutions from VGA to 2 megapixels.

CV/RM/TM Series
(Single-sensor)
A collection of other customer favorites with a range of speeds, resolutions, and interfaces.

Apex Series
(Multi-sensor, prism-based)
3-CMOS and 3-CCD prism-based RGB area scan cameras providing better color fidelity and spatial precision than traditional Bayer cameras.

Fusion Series
(Multi-sensor, prism-based)
Dual-sensor area scan cameras with unique capabilities for specialized imaging applications.

Line Scan Cameras

Sweep+ Series
(Multi-sensor, prism-based)
High performance multi-sensor prism-based color/NIR line scan cameras combining precision, sensitivity and multi-spectral options.

Wave Series
(Multi-sensor, prism-based)
Prism-based dual-sensor InGaAs line scan cameras for Short Wave InfraRed (SWIR) imaging.

Sweep-Series
(Single-sensor, monochrome)
Monochrome line scan cameras with fast scan rates and high image quality.

Spark Series

Advanced area scan cameras delivering high resolution, high frame rates, and high image quality.

JAI’s Spark Series is the perfect choice for applications that demand high quality images with the highest possible throughput. Spark Series cameras feature the latest CMOS imagers capable of delivering high resolution images at speeds as much as 10 times faster than traditional CCD cameras.

With high sensitivity, industrial grade construction, and an attractive price point, it’s easy to see why the Spark Series is an ideal solution for high performance vision applications.

Here are some of the advantages you get with JAI Spark cameras:

- **High throughput:**
  Spark Series cameras deliver outstanding megapixels-per-second performance, such as 20-megapixels at 30 fps (SP-20000), 12-megapixels at up to 189 fps (SP-12000) and 5-megapixels at up to 253 fps (SP-5000). Using flexible ROI capabilities, even higher frame rates can be obtained.

- **Excellent image quality and unique features:**
  Despite their speed, Spark Series cameras feature advanced functions like in-camera pattern correction, multi-region-of-interest, true correlated double sampling (SP-20000/SP-12000), combined analog and digital gain control (SP-5000), and efficient global shutters to ensure low noise, high quality images with high pixel uniformity and no shutter distortion.

- **Outstanding sensitivity and dynamic range:**
  Large, low-noise pixels provide outstanding low light performance, while Auto Level Control (ALC) adjusts to lighting changes in outdoor imaging applications. Special high dynamic range (HDR) options are available to capture both bright and dark details under high contrast conditions.
Based on well-crafted JAI electronics design, the Spark SP-12000-CXP4 delivers a super-fast frame rate of 189 frames/s in full 12 megapixel resolution at 8-bit.

The table below lists all available Spark Series cameras.

*) The SP-12000-CXP4-XT model includes a cooling fan and extends the camera’s operating temperature to +45°C.

Datasheets and manuals for each model with detailed specifications are available at www.jai.com
Go Series

Megapixel area scan cameras with small dimensions, high frame rates and cutting edge sensor technology.

JAI’s Go Series delivers an exceptional blend of small size, high versatility, and excellent performance, all at an entry-level price, making them the perfect starting point for a wide range of machine vision applications.

The GO-5000 for example - packs a high performance 5-megapixel CMOS imager into a compact form factor that fits in your fingertips and weighs only 46 grams. Using a combination of ROI and binning capabilities, this tiny camera can become almost anything you want - from a superfast VGA camera (at nearly 450 fps) to a super sensitive camera using binning to create 10-micron, or even 20-micron effective pixel sizes.

Other Go Series models feature Sony’s latest CMOS imager technology, providing exceptional low-noise characteristics for outstanding sensitivity and image quality.

All Go Series cameras are built for the real world, with robust housings and extensive shock (80G) and vibration (10G) testing to maximize their ability to withstand the rigors of industrial environments. Go Series cameras come with full 3-year warranties.

Go Series cameras offer many advantages, including:

- **Small size and weight:**
  Go Series cameras measure 29 x 29 x 41.5 mm (excluding lens mount) and weigh less than 50 grams, enabling them to fit into small spaces or into vehicles or other applications where weight and size is critical.

- **High frame rates:**
  High performance CMOS imager technology lets Go Series cameras maintain high frame rates despite their small size. The GO-5000-PMCL, for example, can provide full 5-megapixel images at up to 107 fps whereas the GO-2400 delivers up to 165.5 fps in full resolution (2.35 megapixels).

- **High image quality:**
  CMOS technology, large pixels, global shutter, a built-in lookup table, multi-ROI, sequencer, and other advanced features help ensure image quality and operational flexibility beyond entry-level expectations.

If you’re facing a tough price/performance challenge give it a Go!
Small and robust industrial area scan cameras at a great price/performance point.

Check the table below for a list of all available Go Series cameras.

B Series

High fidelity area scan cameras providing excellent sensitivity and uniformity.

JAI’s B Series includes a set of popular camera models designed for applications that demand high image quality with traditional CCD imagers.

The Sony imager technology delivers high levels of sensitivity, uniformity, and NIR response, while minimizing shutter leakage and readout noise. The cameras’ versatile “cube” design allows exceptional flexibility in terms of mounting and orientation.

B Series cameras are available in both monochrome and color versions, and are equipped with more advanced features than those found in JAI’s compact “C Series” CCD cameras.

Key B Series features include:

- **Excellent NIR response:**
  The BM-141GE with its large 6.45-micron square pixels remains one of the industry’s best performers in terms of low-light imaging and NIR sensitivity.

- **Compact optical format:**
  All B Series cameras have a 2/3” optical format. This means even the 5-megapixel BM-500/BB-500 cameras give users a wide range of lens and filter choices without the expense of 1-inch or larger optics.

- **Advanced exposure and triggering:**
  B Series cameras excel in outdoor imaging applications thanks to a range of advanced features. These include auto shutter, auto gain, and auto iris capabilities, as well as Reset Continuous Triggering (RCT) in some models for continuous auto exposure adjustment even in triggered applications.

Combining traditional imager technology with advanced features

Camera Link (CL)

GigE Vision (GE)
C Series

Compact value-oriented CCD cameras with resolutions from VGA to 2 megapixels.

Since their introduction in 2007, JAI’s C Series cameras have tackled a wide range of industrial applications. Their compact form factor, single-tap high frame rate architecture, and standard digital interfaces have provided vision system designers the flexibility and simplicity needed to switch from analog to digital interfacing with minimal mechanical/optical re-design.

JAI’s C Series provides:

- **Six different base resolutions**
  Each base model is available with multiple variations, including remote head configurations and UV sensitivity on some models.

- **Standard digital interfaces**
  Interface options include GigE Vision, Mini Camera Link, and Power over Mini Camera Link.

- **A range of possibilities**
  More than 20 different configurations are possible, letting you find the perfect fit for your application.

Proven performers for a range of tasks

CV/RM/TM Series

*A collection of other customer favorites with a range of speeds, resolutions, and interfaces.*

With more than 50 years in the vision industry, JAI has created many different camera models over the years to meet the needs of a continually growing and changing market. While older models are regularly retired from the JAI product line, there is always a range of proven, mature product offerings that remain available to support the needs of JAI customers and end-users.

These models feature combinations of capabilities and form factors that set them apart from other products in the market and provide the perfect solution for particular systems and tasks.

**Included in these series are:**

- **Multiple analog options**
  Analog choices range from megapixel analog progressive models, to small TV-standard cameras with extended features for more demanding applications.

- **UV sensitive option**
  JAI’s CV-A1 is also available in a UV-sensitive configuration, the CV-A1-UV. This model utilizes a special version of the Sony sensor with a Lumogen coating for increased sensitivity at wavelengths as short as 150 nm, and a quartz cover glass for protection.

Apex Series

3-CCD and 3-CMOS area scan cameras providing better color fidelity and spatial precision than traditional Bayer color cameras.

JAI’s Apex Series is a range of 3-CCD area scan cameras delivering advanced RGB color imaging that’s ideal for demanding machine vision applications across a diverse range of industries.

Advanced prism technology separates the incoming light into red, green, and blue wavelengths, which are directed to three precisely-aligned CCDs.

The Apex series provides:

- **Accurate colors:**
  More accurate per-pixel color values than those derived from Bayer color cameras with interpolation routines.

- **Steep spectral curves:**
  Steep spectral curves (less crosstalk) producing exceptionally accurate color image data.

- **Sharper details:**
  More precise spatial resolution, enabling more accurate edge detection and the ability to resolve smaller details on the inspected items.

JAI’s prism-based area scan cameras detect even the most subtle color variations and details.

Superior color for the most demanding applications.

Fusion Series

Dual-Sensor area scan cameras with unique capabilities for specialized imaging applications.

JAI’s Fusion Series uses dual-sensor prism technology to deliver imaging solutions that are both innovative and cost-effective.

Multi-spectral cameras perform both visible and near-infrared inspection simultaneously, by splitting incoming light to two separate imagers. This makes it possible to use a single camera to simultaneously inspect both visible elements and sub-surface defects or other information that is optimally detected at NIR wavelengths.

High Dynamic Range (HDR) cameras also split light to two separate sensors, but in this case, the imagers are used to provide two separate exposures, which are then fused together in the camera or in post processing. In this way, details in both bright and dark areas can be properly captured, extending the camera’s dynamic range to nearly twice the dynamic range of a standard CCD.

With the Fusion Series you get:

- **Two-in-one camera:** Multi-spectral imaging technology allows users to replace multiple inspection stations with a single set up.
- **Ease-of-use:** JAI multi-spectral cameras offer ease-of-use and lower equipment and maintenance costs.
- **Exceptionally good HDR images:** The dual-sensor HDR design enables the capture of full linear high dynamic range image data without the image compression and noise found in typical single sensor HDR cameras.

JAI Fusion Series of multi-spectral area scan cameras, performs simultaneous, separate imaging of visible and NIR light through a single lens.

The unique concept of simultaneous capture of color and Near-IR images helps solve a wide variety of inspection tasks. Surface properties are visible in the color channel while the near-IR channel detects just below the surface.

Innovative solutions for multi-spectral imaging and high dynamic range.

Sweep+ Series

High performance prism-based color line scan cameras combining color precision, light sensitivity, fast line rates, ease of use and multi-spectral options.

JAI’s Sweep+ Series uses advanced prism technology to provide the best possible performance, precision, and versatility for line scan cameras in web-based or continuous imaging applications. Multiple CCD (3-CCD and 4-CCD) or multiple CMOS (3-CMOS and 4-CMOS) line sensors are precisely-aligned to a common optical path providing solutions that are easier to set up, with higher color precision and less color degradation over time than tri-linear or quad-linear color cameras. With efficient manufacturing facilities and reliable and durable technology, these cameras are available at good price/performance points and offer low cost of ownership as well as supreme color line scan image quality.

This is what you get with the Sweep+ Series:

- **Better images in all inspection situations:** Eliminates parallax issues (no halo effects) and eliminates complex alignment procedures associated with off-angle viewing or inspection of cylindrical or wavy objects.

- **Lower configuration costs:** Lower setup costs due to faster configuration and a single optical plane that simplifies positioning and encoding tasks.

- **High speed and high sensitivity:** Advanced sensor technology and better light transmittance reduces illumination requirements, for better performance at lower cost.

Multi-Sensor precision color line scan cameras
Advanced prism technology supports up to four separate sensors for precise R-G-B values and NIR imaging capabilities. The incoming light is split into 3 or 4 spectral bands (R, G, B) or (R, G, B + NIR) with perfect pixel-to-pixel alignment.

Wave Series

The Wave Series cameras are dual-band line scan cameras capable of sensing Short Wave InfraRed (SWIR) light. The cameras are based on Indium/Gallium/Arsenide (InGaAs) sensor technology and JAI’s prism line scan technology, making them capable of delivering dual-band imaging in the SWIR light spectrum (900 – 1700 nm).

Multi-imager camera technology is a JAI core competence and over the years JAI has delivered cameras covering RGB and NIR into various applications.

The new Wave Series camera brings dual-band imaging to the SWIR light spectrum to provide lots of extra “hidden” vision data. This capability can enhance current machine vision systems with imaging beyond what is possible when imaging the visible and/or the near infrared light spectrum. The Wave Series can open up a range of new applications in automated visual inspection.

Thanks to prism-based simultaneous image acquisition, it’s possible to precisely align images in two different spectral bands even when objects are moving at high speeds. The WA-1000D-CL has a resolution of 2 x 1024 pixels and a maximum line frequency of 39 kHz.
Operation of the Wave Series camera is straightforward; no cooling is required and the data interface is standard Camera Link. The price level of the Wave Series line scan camera is lower than you may expect and the cost of ownership is comparable to a standard machine vision camera.

An advantage in SWIR is the variety of off-the-shelf optics available in comparison with MWIR cameras that require custom lenses and windows made of expensive materials.

Sweep Series

Monochrome CMOS line scan cameras with high resolution, fast scan rates and high image quality.

JAI's Sweep Series of monochrome line scan cameras provide an excellent combination of high resolution and fast scan rates.

The Sweep SW-8000M-CL model features an 8192-pixel linear CMOS sensor delivering a line rate of 100,000 lines/second (100 kHz) over a Camera Link interface.

The SW-4000M-CL model is based on a 4096-pixels sensor capable of running as fast as 200,000 lines/second (200 kHz) over Camera Link. Both the SW-4000M-CL and SW-8000M-CL models are among the fastest monochrome line scan camera available on the market in their respective categories.

The SW-4000 cameras feature selectable quantum well sizes, enabling users to adjust responsivity and dynamic range to suit their application.

JAI's monochrome line scan cameras can be used in food sorting, pharmaceutical label inspection, material inspection, sorting of recycled material, postal sorting, sports, printed circuit board inspection, general web inspection and traffic applications such as train, railway, container and vehicle inspection.

All models offer an excellent price/performance ratio, so you can stretch your camera budget further, getting more cameras for the same investment.

Among the advantages offered by the Sweep Series are:

- **Ultra-fast scan rates:**
  The SW-4000-CL (4096-pixels) and SW-8000-CL (8192 pixels) monochrome line scan cameras are among the fastest cameras available in their respective categories with 200 kHz and 100 kHz line rates, respectively.

- **Choice of lens mounts:**
  SW-4000M-CL and SW-8000M-CL are available with F-Mount or M-42 Mount, providing a wider range of lens options.
The Sweep SW-4000M-PMCL and SW-8000M-PMCL are also available with M-42x1 lens mount.

Datasheets and manuals for each model with detailed specifications are available at www.jai.com

*) Also available with M-42x1 mount.

JAI SDK

Standards-driven software that’s both vendor and interface independent.

The JAI SDK and Control Tool is a robust software package for integrating cameras into vision applications. It is available for free from JAI and is an open software environment, meaning it can be used with JAI cameras as well as third-party cameras that comply with the GigE Vision®, GenICam™, and GenTL™ standards.

The Control Tool’s GigE Vision and GenICam compliance ensures full interoperability with virtually all standard GigE Vision cameras, making it the perfect choice for testing and evaluating cameras. In addition, its support of the GenTL standard enables it to be used with GenTL-compliant cameras utilizing Camera Link, USB3 Vision, and CoaXPress interfaces. These include JAI’s Spark Series, and Go Series cameras, with additional cameras expected to be supported shortly.

With the JAI SDK and Control tool you get:

**True vendor independence**
- There are no “locks” or JAI-only restrictions. Use it with any standards-compliant cameras to evaluate or develop complete applications.

**User-friendly setup**
- The Control Tool’s graphical user interface allows the user to see and activate all the available features and functions of the connected camera(s) automatically, based on an XML file stored within the camera’s firmware. Streaming and viewing capabilities vary depending on the interface.

**Powerful functions and examples**
- The SDK itself includes a wide range of image processing functions and libraries, as well as reference documentation and C++/C# sample code for the Visual Studio IDE. Also included is a JAI filter driver for fast and efficient streaming of packet-based data.

The JAI SDK and Control Tool runs on the latest Windows operating systems and is also available upon request for the most popular Linux distributions. Contact JAI for more information.

<td></td>
</tr>
</tbody>
</table>

### Other Interfaces Types and Available Models:

- PAL/CCIR: RM-675NIR, RMC-675, RMC-673, RM-673NIR
- NTSC/EIA: TMC-775, TM-775NIR, TMC-773, TM-773NIR
- EIA: TM-770

- USB = USB3 Vision
- GE = GigE Vision
- GE2 = GigE Vision Link Aggregation
- PGE = Power over Ethernet/GigE Vision

- CXP = CoaXPress with 1-connector
- CXP2 = CoaXPress with 2-connectors
- CXP4 = CoaXPress with 4-connectors

- CL = Camera Link
- MCL = Mini Camera Link
- PMCL = Power over Mini Camera Link

- 5.0 Megapixels
- 12.0 – 20.0 Megapixels
- 2.1 – 4.0 Megapixels
- 1.0 – 2.0 Megapixels
- 0.3 – 0.9 Megapixels
## INTERFACE, DATAOUT AND CABLE LENGTH

### CoaXPress

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Interface Throughput</th>
<th>Effective Data Throughput</th>
<th>Max Cable Length</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CXP</strong> = CoaXPress with one connector</td>
<td>3.125 Gbit/s</td>
<td>312 MB/S</td>
<td>85 meters</td>
</tr>
<tr>
<td><strong>CX2</strong> = CoaXPress with two connectors</td>
<td>6.25 Gbit/s</td>
<td>625 MB/S</td>
<td>85 meters</td>
</tr>
<tr>
<td><strong>CX4</strong> = CoaXPress with four connectors</td>
<td>12.5 Gbit/s</td>
<td>1250 MB/S</td>
<td>85 meters</td>
</tr>
</tbody>
</table>

**In CXP-3 configuration**
- Max interface throughput: 3.125 Gbit/s
- Effective data throughput: 312 MB/S
- Max cable length: 85 meters

**In CXP-6 configuration**
- Max interface throughput: 6.25 Gbit/s
- Effective data throughput: 625 MB/S
- Max cable length: 35 meters

### GigE Vision

<table>
<thead>
<tr>
<th>Interface</th>
<th>Max Interface Throughput</th>
<th>Effective Data Throughput</th>
<th>Max Cable Length</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>GE</strong> = GigE Vision Interface</td>
<td>1 Gbit/s</td>
<td>115 MB/S</td>
<td>100 meters</td>
</tr>
<tr>
<td><strong>GE2</strong> = GigE Vision Interface - Link Aggregation</td>
<td>2 Gbit/s</td>
<td>230 MB/S</td>
<td>100 meters</td>
</tr>
<tr>
<td><strong>PGE</strong> = Power Over Ethernet/GigE Vision</td>
<td>1 Gbit/s</td>
<td>115 MB/S</td>
<td>100 meters</td>
</tr>
</tbody>
</table>

**In GE configuration**
- Max interface throughput: 1 Gbit/s
- Effective data throughput: 115 MB/S
- Max cable length: 100 meters

**In GE2 configuration**
- Max interface throughput: 2 Gbit/s
- Effective data throughput: 230 MB/S
- Max cable length: 100 meters

**In PGE configuration**
- Max interface throughput: 1 Gbit/s
- Effective data throughput: 115 MB/S
- Max cable length: 100 meters

### Camera Link

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Interface Throughput</th>
<th>Effective Data Throughput</th>
<th>Max Cable Length</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CL</strong> = Camera Link interface</td>
<td>2.0 Gbit/s</td>
<td>255 MB/S</td>
<td>10 meters</td>
</tr>
<tr>
<td><strong>MCL</strong> = Mini Camera Link</td>
<td>4.08 Gbit/s</td>
<td>510 MB/S</td>
<td>10 meters</td>
</tr>
<tr>
<td><strong>PMCL</strong> = Power Over Mini Camera Link</td>
<td>5.44 Gbit/s</td>
<td>680 MB/S</td>
<td>10 meters</td>
</tr>
</tbody>
</table>

**In CL configuration**
- Max interface throughput: 2.0 Gbit/s
- Effective data throughput: 255 MB/S
- Max cable length: 10 meters

**In MCL configuration**
- Max interface throughput: 4.08 Gbit/s
- Effective data throughput: 510 MB/S
- Max cable length: 10 meters

**In PMCL configuration**
- Max interface throughput: 5.44 Gbit/s
- Effective data throughput: 680 MB/S
- Max cable length: 10 meters

**In CL configuration (Full 80-bit Deca)**
- Max interface throughput: 6.80 Gbit/s
- Effective data throughput: 850 MB/S
- Max cable length: 7 meters

### USB Vision

<table>
<thead>
<tr>
<th>Interface</th>
<th>Max Interface Throughput</th>
<th>Effective Data Throughput</th>
<th>Max Cable Length</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>USB</strong> = USB3 Vision Interface</td>
<td>5 Gbit/s</td>
<td>400 MB/S</td>
<td>3 - 5 meters</td>
</tr>
</tbody>
</table>

**In USB3 configuration**
- Max interface throughput: 5 Gbit/s
- Effective data throughput: 400 MB/S
- Max cable length 3 - 5 meters

The USB3 Vision interface also supports "power over the interface" as a standard capability. (Except where the power requirements of the camera exceeds the capacity of the interface. Consult the documentation for details.)

*) Depending on Sensor tap configuration.
Supreme image fidelity, flexible operation together with outstanding reliability and durability are what every JAI camera solution delivers to you.

Everywhere. Every time. Every day.
